

STOCKYARD

16 apps. One binary. Zero dependencies.
The complete LLM infrastructure platform

stockyard.dev

The Problem

You shipped an app with LLM calls. Now you need:

- Cost caps, caching, and rate limiting
- Safety filters, PII redaction, and prompt injection detection
- Provider routing and failover across OpenAI, Anthropic, Groq, etc.
- Observability: traces, cost attribution, anomaly detection
- Prompt versioning, A/B testing, evaluation workflows
- Audit trails, compliance evidence, tamper-evident logging
- Workflow orchestration for multi-step LLM pipelines

That's 6+ separate tools, each with its own deployment, configuration, billing, and failure modes.

The Solution

Stockyard replaces all of them.

ONE BINARY. 30-SECOND INSTALL. ZERO EXTERNAL DEPENDENCIES.

App	Replaces	Key Feature
Proxy	LiteLLM, AI Gateway	66 middleware modules, 16 providers
Observe	Langfuse, Helicone	Cost attribution, anomaly detection
Trust	Custom audit systems	SHA-256 hash-chained ledger
Studio	PromptLayer, Humanloop	Version control, A/B experiments
Forge	LangChain, custom DAGs	Workflow engine with tool registry
Exchange	Manual config	One-click config pack marketplace
Billing	Stripe + custom metering	Per-customer usage billing
Copilot	Manual configuration	NL platform configuration via LLM

Architecture

Single Go binary. SQLite storage. No containers, no Kubernetes, no Redis, no Postgres.

Component	Detail
Language	Go 1.22 with ServeMux routing
Storage	SQLite (embedded, zero-config)
Binary size	~25MB (CGO_ENABLED=0)
Provider keys	AES-256-GCM encrypted at rest
Auth	Admin key + per-user API keys + RBAC
Middleware	66 modules, 400ns overhead per chain
API	350+ endpoints, OpenAI-compatible proxy
Deployment	Railway, Docker, bare metal, or curl install

Business Model

SUBSCRIPTION REVENUE

Tier	Monthly	Annual	Includes
Free	\$0	\$0	Self-hosted, all features, all apps
Pro	\$29	\$290	Cloud-managed, zero ops, priority support
Team	\$99	\$990	5 seats, RBAC, compliance, +\$20/seat
Enterprise	\$299	\$2,990	Unlimited seats, SSO, SLA, dedicated

PLATFORM REVENUE

Stream	Fee	How It Works
App Builder	20%	Builders publish paid AI apps, platform takes 20%
Mesh GPU	12%	GPU owners serve inference, platform takes 12%
Knowledge	20%	Authors sell knowledge base queries, platform takes 20%
Reseller	2.5%	Operators bill their customers, platform takes 2.5%
Seats	\$20/seat	Team plans charge per additional seat beyond 5

All revenue streams use Stripe metered billing. We never hold customer funds.

Security

Layer	Implementation
Provider keys	AES-256-GCM encrypted at rest
Admin auth	Constant-time comparison, empty-key blocked
API keys	SHA-256 hash lookup, 24-byte crypto/rand entropy
Passwords	PBKDF2-HMAC-SHA256, 100k iterations, random salt
RBAC	Role-based enforcement (owner/admin/developer/viewer)
SSRF	Private IP blocking on Forge HTTP steps + mesh nodes
XSS	html.EscapeString on all HTML-rendered user data
Rate limiting	10 req/min/IP on public POST endpoints
Body limits	5MB management API, 10MB proxy
Webhooks	HMAC-SHA256 Stripe signature verification
SQL	100% parameterized queries, zero interpolation
CORS	Exact-match origin validation
PII detection	Auto-scanner checks traces for email/phone/SSN/CC

Get Started

```
curl -sSL https://stockyard.dev/install.sh | sh
```
