

STOCKYARD

Six apps. One binary. Zero dependencies.

The complete LLM infrastructure platform

stockyard.dev

The Problem

You shipped an app with LLM calls. Now you need:

Cost caps, caching, safety filters, routing, observability,
prompt management, audit trails, and workflow orchestration.

That's 6+ separate tools, each with its own Redis, Postgres,
Docker setup, and maintenance burden.

Teams spend weeks stitching together LLM infrastructure
instead of building their actual product.

The Solution

Stockyard replaces all of them.

ONE BINARY. 30-SECOND INSTALL. ZERO EXTERNAL DEPENDENCIES.

Proxy	58 middleware modules, 16 providers, OpenAI-compatible endpoint
Observe	Automatic tracing, cost dashboards, anomaly detection, alerts
Trust	Append-only audit ledger, hash-chain integrity, compliance
Studio	Versioned prompts, A/B experiments, benchmarks
Forge	DAG workflow engine, tool registry, stateful sessions
Exchange	Config pack marketplace, one-click install, env sync

By the Numbers

58	middleware modules, each runtime-toggleable via API
16	LLM providers supported out of the box
62	REST API endpoints across all 6 apps
400ns	per-request overhead (benchmarked, 58-module chain)
~15MB	single binary size (Go + embedded SQLite)
AES-256-GCM	encryption for all provider keys at rest
30s	from curl to first proxied LLM request

Pricing

Every tier includes all 58 modules, all 16 providers, all 6 apps.

Tier	Monthly	Annual	Includes
Community	Free forever	\$0	Self-hosted, 10K req/mo
Individual	\$9.99/mo	\$99/yr	Unlimited requests, priority support
Pro	\$49/mo	\$490/yr	Cloud-managed, auto backups, 90-day retention
Team	\$149/mo	\$1,490/yr	Multi-seat, SSO, shared configs
Enterprise	\$499/mo	\$4,990/yr	Dedicated infra, custom SLAs

Annual billing saves 17% (2 months free).

Competitive Landscape

vs LiteLLM

Python + Redis + Postgres. Great provider coverage. No built-in observability, audit, or workflows.

vs Helicone

Observability-only. No proxy routing, caching, safety, prompts, or workflows.

vs Portkey

SaaS-only. No self-hosted option. Limited to proxy + observability.

vs DIY

Months of integration work. Stockyard ships in 30 seconds.

Try it live. No signup.
